Abstract

A joints meeting of the 12th Setouchi International Conference on Clinical Trials and the 32nd Aso-Kuju Conference on Clinical Pharmacology was held on the 5th and 6th of October, 2013 at Matsuyama, Ehime. The first main theme in the meeting was industry-government-academia collaboration for the clinical studies to develop new drugs.

Most of the textile industries have already moved out of Japan, especially to south-east Asian countries. Most of the factories producing radios, TV sets, washing machines or refrigerators also moved out of Japan and car factories are now moving out. Therefore the health industry should grow to be the one of leading industries in Japan.

We proposed industry-government-academia collaboration to develop new drugs efficiently. The second topic in this meeting was adaptive clinical trials. This is a new efficient method for clinical trials to develop the agent which will have a wide possible range in the dosages in clinical trials. We hope this meeting will contribute to promote the development of new drugs in Japan.

Key words

industry-government-academia collaboration, clinical study, adaptive clinical trials
