Abstract

The OECD Guidelines for the testing of chemicals TG 210 (Test No. 210: Fish, early-life stage toxicity test), ANNEX 5 (Statistical guidance for NOEC determination) is the part added in the revision of July 2013. This guidance is important in many toxicity tests as well not only in fish toxicity tests. Therefore, its translation is published in this issue of *Rinsho Hyoko (Clinical Evaluation)*. However, this translation has many places that are difficult for the readers to understand, or require annotations. Translation is performed under the permission of OECD (Organisation for Economic Co-operation and Development), but the permission requirement is without annotations and so on. Thus, we cannot include annotations in it. Therefore, we will supplement it in this paper.

Key words

toxicity test, Dunnett's test, Williams' test, Jonckheere-Terpstra test, Bonferroni-Holm adjustment

Rinsho Hyoka (Clinical Evaluation). 2018 ; 46 : 77-82.
